Profile

Senior front-end developer with 12 years of experience, specializing in mobile H5 development, engineering system design, and AI-driven frontend efficiency improvement. Led frontend architecture for core business lines at Huya (DIY platform, payment, authentication). Built 3 core npm packages and 50+ reusable components covering 90%+ of revenue-generating activities. Proficient in leveraging LLMs and AI tools, having implemented an AI-powered assistant and Prompt Engineering framework that significantly improved team development efficiency. Strong cross-team collaboration and problem-solving skills, with continuous research and practice in cutting-edge technologies such as AI Agents and on-device intelligence.

Education

Guangdong University of Technology — B.S. Computer Science & Technology
Sep 2009 – Jun 2013

Work Experience

Huya Inc. (虎牙直播)
Dec 2016 – Present

Responsible for frontend development and architecture of Huya's core revenue businesses including DIY platform, payments, authentication, and AI-powered applications. Lead team engineering initiatives and component library development, supporting hundreds of live-streaming events annually.

- DIY Platform Core Development:** Leading overall frontend architecture iteration of our internal low-code DIY platform. Built a mobile-first standardized dev template based on React 18 + pnpm v10 + Node.js 22+, unified team tech stack and coding conventions; designed global JS/CSS build pipeline (Gulp) and Tiger deployment workflow to ensure stable production updates.
- Component Library & npm Ecosystem:** Developed 3 core team npm packages (@diy-npm/diyrealprizeCollect for address collection, @diy-npm/diybindGame for game binding, @diy-npm/utills for shared utilities). Accumulated 50+ reusable business components across 12 categories (friend invite s, lucky draws, points redemption, badges, leaderboards, tournaments, etc.), achieving 80% reuse rate and reducing per-activity development cycle by 50%.
- AI Assistant for DIY Platform:** Led the implementation of an AI-powered intelligent assistant based on Dify LLM platform, providing component Q&A, configuration recommendations, and troubleshooting capabilities.
- Core Business Infrastructure:** Responsible for full-scenario real-name identity verification (streamer auth, coaching auth, withdrawal auth, external shopping), third-party payment system, 4 core middleware pages for cross-business navigation, and @huyafed/openapp SDK for launching the Huya app from external browsers — supporting 10+ core business lines.

YY Inc. (YY语音)
Jun 2014 – Dec 2016

Responsible for frontend development of Duowan (斗鱼) gaming portal and Huya Video at the Website Center:

- Led the frontend redesign and redevelopment of Duowan web portal and mobile site
- Developed game collaboration campaign landing pages
- Led the frontend redesign of Huya Video web portal and mobile site

NetEase Games (网易游戏)
Jul 2013 – Jun 2014

Participated in game official websites and campaign event landing pages at the Website Center:

- Led and developed official website pages for Fantasy Westward Journey 2 (梦幻西游2) and Tianxia 3 (天涯明月刀)

- Responsible for game campaign event landing page development across various game titles
- Led the frontend development of the campaign publishing system, architected its foundation from scratch, and drove rapid deployment across the organization

Key Projects

⌵ DIY Platform — Frontend Engineering & Componentization

Tech Stack: [React](#), [Ant Design](#)

- Built a mobile-first standardized development template for the DIY platform, unified code standards and build pipelines, improving new employee onboarding efficiency by 30%
- Designed and implemented 3 core npm packages encapsulating common prize collection, game binding logic, and utility functions — reused by 10+ projects across the company
- Accumulated 50+ general-purpose business components covering 90%+ of revenue-generating activity scenarios, supporting nearly 1,000 events to launch rapidly over time

⌵ AI-Powered Intelligent Assistant for DIY Platform

Tech Stack: [React](#), [Dify LLM Platform](#), [SSE Streaming](#), [react-mentions](#), [XMarkdown](#)

- **Dify LLM Platform Integration:** Built a component-based intelligent Q&A system enabling **AI empowerment** for operations teams using the DIY builder
- **SSE Streaming:** Real-time reception of LLM streaming responses via Fetch API + ReadableStream, significantly optimizing user wait-time experience
- **Multi-modal Interaction:** Supports text + image multi-modal input; users can upload screenshots for issue troubleshooting, improving communication efficiency
- **Intelligent @mention System:** Custom `@componentName` and `#configOption` triggers that dynamically fetch page component info and pass structured context to the AI
- **Conversation Management:** Multi-turn dialogue context maintained via `conversation_id`, integrated thumbs-up/down feedback mechanism for continuous model optimization
- **Prompt Engineering:** Designed structured prompt templates (environment, device, category, input) to guide AI output of standardized JSON configuration recommendations
- **User Experience Optimization:** Draggable floating entry point, real-time Markdown rendering, loading state management, auto-scroll, and other interaction details

⌵ Payment System & Middleware Infrastructure

Tech Stack: [React](#), [Gulp](#), [npm](#), [Cross-platform Communication](#)

- Responsible for Huya Payment Web-side and third-party payment npm package (@huyafed/thirdpay) development and maintenance, supporting core payment scenarios like emoji sticker purchases and commission withdrawals
- Developed and maintained 4 core business middleware pages (binding middleware, partner launch middleware, business routing middleware, etc.) unifying cross-business navigation logic
- Built @huyafed/openapp deep-linking SDK to resolve cross-browser app-launch compatibility issues, achieving 99%+ coverage across mobile devices
