Profile

Senior Front-End Engineer with 12 years of experience specializing in mobile H5 development, engineering system architecture, and AI-driven productivity. Led frontend architecture for Huya's core business lines — DIY platform, payment systems, authentication, and middleware — delivering 3 core npm packages and 50+ reusable components that cover 90%+ of revenue-generating scenarios and cut per-activity development time by 50%. Built an AI-powered intelligent assistant on the Dify LLM platform with a structured Prompt Engineering framework. Active practitioner of AI Agent and on-device intelligence technologies, with strong cross-team collaboration and complex problem-solving skills.

Skills

- Frontend: React 18+, TypeScript, Ant Design
- Engineering: pnpm v10+, Gulp, Node.js v22+
- AI / LLM: Dify platform, Prompt Engineering, SSE streaming, multi-modal interaction, AI Agent
- Cross-Platform & SDK: Mobile H5, app-launch SDK
- Componentization & npm: 3 core npm packages, 50+ reusable components across 12 categories

Education

 Guangdong University of Technology — B.S. Computer Science & Technology
Sep 2009 – Jun 2013

Work Experience

 Huya Inc. (斗鱼直播)
Dec 2016 – Jun 2026

Responsible for frontend development and architecture of Huya's core revenue businesses including DIY platform, payments, authentication, and AI-powered applications. Lead team engineering initiatives and component library development, supporting hundreds of live-streaming events annually.

- DIY Platform Core Development:** Leading overall frontend architecture iteration of our internal low-code DIY platform. Built a mobile-first standardized dev template based on React 18 + pnpm v10 + Node.js 22+, unified team tech stack and coding conventions; designed global JS/CSS build pipeline (Gulp) and Tiger deployment workflow to ensure stable production updates.
- Component Library & npm Ecosystem:** Developed 3 core team npm packages (@diy-npm/diyrealprizeCollect for address collection, @diy-npm/diybindGame for game binding, @diy-npm/utlils for shared utilities). Accumulated 50+ reusable business components across 12 categories (friend invite, lucky draws, points redemption, badges, leaderboards, tournaments, etc.), achieving 80% reuse rate and reducing per-activity development cycle by 50%.
- AI Assistant for DIY Platform:** Led the implementation of an AI-powered intelligent assistant based on the Dify LLM platform, delivering component Q&A, configuration recommendations, and troubleshooting. Integrated SSE streaming and multi-modal interaction (text + image), covering daily operations workflows and significantly reducing manual support overhead.
- Core Business Infrastructure:** Responsible for full-scenario real-name identity verification (streamer auth, coaching auth, withdrawal auth, external shopping), third-party payment system, 4 core middleware pages for cross-business navigation, and @huyafed/openapp SDK for launching the Huya app from external browsers — supporting 10+ core business lines.

 YY Inc. (YY直播)
Jun 2014 – Dec 2016

Responsible for frontend development of **Duowan** (网易) gaming portal and **Huya Video** at the Website Center:

- Led end-to-end frontend redesign of Duowan web portal and mobile site, implementing responsive design across mainstream devices with significant page load performance optimization
- Developed 30+ game collaboration campaign landing pages
- Led full-stack frontend redesign of Huya Video web portal and mobile site, optimizing video playback experience and first-screen load time

NetEase Games (网易游戏)

Jul 2013 – Jun 2014

Participated in **game official websites and campaign event landing pages** at the Website Center:

- Led frontend architecture and core module development for official websites of flagship titles (**Tianxia 3** and **Fantasy Westward Journey 2**)
- Developed 20+ marketing campaign landing pages across multiple game genres
- Architected and built the campaign publishing system's frontend from scratch, driving rapid adoption across the department and reducing campaign launch cycle by 50%

Key Projects

DIY Platform — Frontend Engineering & Componentization

Tech Stack: React, Ant Design

- Built a mobile-first standardized development template for the DIY platform, unified code standards and build pipelines, improving new employee onboarding efficiency by 30%
- Designed and implemented 3 core npm packages encapsulating common prize collection, game binding logic, and utility functions — reused by 10+ projects across the company
- Accumulated 50+ general-purpose business components covering 90%+ of revenue-generating activity scenarios, supporting nearly 1,000 events to launch rapidly over time

AI-Powered Intelligent Assistant for DIY Platform

Tech Stack: React, Dify LLM Platform, SSE Streaming, react-mentions, XMarkdown

- **Dify LLM Platform Integration**: Built a component-based intelligent Q&A system enabling **AI empowerment** for operations teams using the DIY builder
- **SSE Streaming**: Real-time reception of LLM streaming responses via Fetch API + ReadableStream, significantly optimizing user wait-time experience
- **Multi-modal Interaction**: Supports text + image multi-modal input; users can upload screenshots for issue troubleshooting, improving communication efficiency
- **Intelligent @mention System**: Custom `@componentName` and `#configOption` triggers that dynamically fetch page component info and pass structured context to the AI
- **Conversation Management**: Multi-turn dialogue context maintained via conversation_id, integrated thumbs-up/down feedback mechanism for continuous model optimization
- **Prompt Engineering**: Designed structured prompt templates (environment, device, category, input) to guide AI output of standardized JSON configuration recommendations
- **User Experience Optimization**: Draggable floating entry point, real-time Markdown rendering, loading state management, auto-scroll, and other interaction details

Payment System & Middleware Infrastructure

Tech Stack: React, Gulp, npm, Cross-platform Communication

- Responsible for Huya Payment Web-side and third-party payment npm package (@huyafed/thirdpay) development and maintenance, supporting core payment scenarios like emoji sticker purchases and commission withdrawals
- Developed and maintained 4 core business middleware pages (binding middleware, partner launch middleware, business routing middleware, etc.) unifying cross-business navigation logic
- Built @huyafed/openapp deep-linking SDK to resolve cross-browser app-launch compatibility issues, achieving 99%+ coverage across mobile devices

Achievement Jungle — Vibe Coding Full-Stack Solo Build

Tech Stack: React 19, TypeScript, Vite 6, TailwindCSS v4, React Router v7, Node.js, Express, Supabase, Vercel, PWA

URL: <https://littletreecheckin.mrfangge.com/>

- Independently built a full-stack gamified children's habit-tracking PWA from scratch, featuring forest visualization, daily check-in with parent approval, achievement medals, fruit store, shared task competition, and 10+ core modules
- Frontend built with React 19 + TypeScript + Vite 6 + TailwindCSS v4 + motion/react, route-level code-splitting via React Router v7 with lazy loading, responsive layout across mobile/desktop, and dark mode
- Backend powered by Node.js + Express 4 + TypeScript, Supabase (PostgreSQL) for data persistence and Auth, deployed on Vercel Serverless Functions
- PWA with offline caching and install-to-homescreen support across Android Chrome, iOS Safari, and desktop — running in production with real users

Children's Growth Record — Vibe Coding Cross-Platform Desktop App

Tech Stack: Electron 25, React 18, Vite 4, TypeScript 5, Ant Design 5, electron-store, electron-builder

URL: <https://github.com/fangge/children-rewards-collect>

- Independently built a cross-platform desktop app with Electron for macOS/Windows, designed for managing children's award records and certificate display
- Frontend powered by React 18 + Vite 4 + TypeScript 5 + Ant Design 5, featuring child profile management, certificate categorization with image upload, and a timeline visualization wall
- Local data persistence via electron-store with JSON import/export and merge support, plus custom image storage paths organized by award date
- Engineering standards include ESLint + Prettier, Git Hooks for commit validation, electron-builder for installer packaging, and pnpm for dependency management
